

EUNICE LOREN S. CABALO

Web Development & Technical Support Virtual Assistant

eunicecabalo.official@gmail.com | +63 976 490 0811 | Laguna, Philippines

[LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer Science student specializing in Data Science with hands-on experience developing and troubleshooting web and mobile applications using PHP, MySQL, HTML/CSS, Flutter, and Firebase. Independently rebuilt an e-commerce system by improving transaction handling, resolving pricing inconsistencies, and replacing vulnerable SQL queries with prepared statements. Also developed the Flutter frontend of a client-based church management application. Seeking a Web Development or Technical VA role focused on website maintenance, troubleshooting, database support, and technical assistance.

KEY SKILLS

Website Development • Website Maintenance & Troubleshooting • Database Design • Technical Support • Mobile App Development • SQL • Technical Documentation • Problem Solving • Time Management • Remote Communication

TECHNICAL SKILLS

- **Web:** HTML, CSS, PHP, MySQL
- **Programming:** Python, C#, C++, C
- **Mobile & Backend:** Flutter, Dart, Firebase (Authentication, Firestore, Cloud Messaging)
- **Tools:** Git, GitHub, Google Workspace, Microsoft 365, Canva, CapCut, phpMyAdmin, XAMPP
- **AI Tools:** ChatGPT, Claude, Gemini, GitHub Copilot
- **Communication:** Zoom, Google Meet, Slack, Discord, Google Chat

EDUCATION

Bachelor of Science in Computer Science, Special Track in Data Science

Laguna University, Laguna, Philippines | Expected 2028

PROJECTS

SoftCart E-Commerce System | PHP, MySQL, HTML, CSS | [GitHub](#)

Independent rebuild of a group e-commerce database project — found and fixed real production-style issues:

- Reworked the checkout stored procedure to use a single database transaction with commit/rollback, preventing partial orders when transactions fail.
- Resolved inconsistent discount calculations by routing storefront and checkout pricing through a shared stored function.
- Replaced vulnerable string-built SQL queries with prepared statements across cart, checkout, and login flows to mitigate SQL injection risks.
- Designed and documented a five-table relational database with stored procedures, functions, triggers, price-change auditing, and low-stock alerts.

ChurchMate — Church Youth Management App | Flutter, Dart, Firebase | [GitHub](#)

Two-person team project | Client: Our Daily Bread Presbyterian Church - Dayap

- Developed the entire Flutter frontend across three modules: Faith (QR-code event attendance), Library (book catalog and borrowing), and Finance (donations, expenses, and budget tracking).
- Developed a role-based Flutter dashboard for Youth Leaders and Youth Members and integrated the frontend with the team's Firebase backend for role-specific access and data display.
- Implemented QR-code generation and scanning for event check-in, connecting the scan workflow to attendance records in the application.

SEMINARS & ACTIVITIES

- Orientation of Students' Research Program, Laguna University — July 2026
- Introduction to Xinyx Design & Campus Connect — CCS Company Visit, November 2024
- Future of Jobs in AI and Cybersecurity Fields — CCS Company Visit, November 2024
- Best Leader, Team Building — Computer Science Department General Assembly, August 2024

REMOTE WORK READINESS

- **Internet:** Converge Fiber, 400+ Mbps tested speed; backup mobile data hotspot
- **Power backup:** EcoFlow portable power station (240Wh / 300W output) for router and laptop during outages
- **Equipment:** Desktop PC (Ryzen 5 5600G, 16GB RAM) and Lenovo V15 laptop as backup, HD webcam, Aula F7 Pro headset
- **Availability:** 8:00 PM–7:00 AM PHT
- **Languages:** English (Fluent), Filipino (Native)
